

TRANSIT FEASIBILITY STUDY

FACT SHEET
SPRING ■ 2018

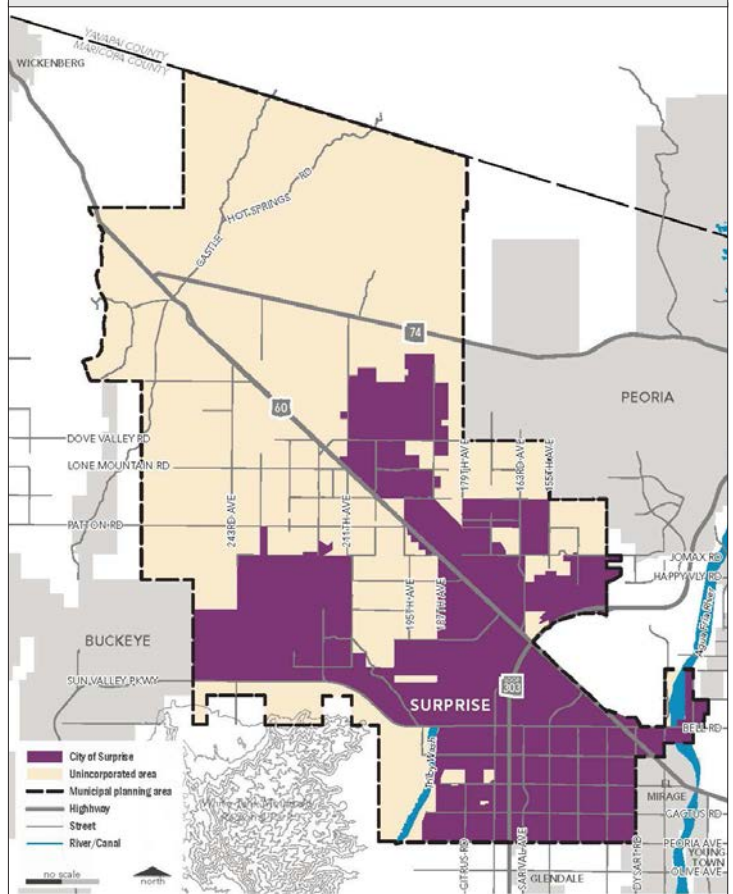

The City of Surprise recently began a Transit Feasibility Study. The study will look at demographics, and how people travel in the Surprise area. The goal is to understand how transit can best serve Surprise residents and visitors, including what type of service will be needed and where transit will be most successful.

Current transit service will be evaluated including areas of service, frequency of service, and types of fares. The study will also look at the current top community travel destinations like schools, medical facilities, shopping and other activity areas that could be served with transit.

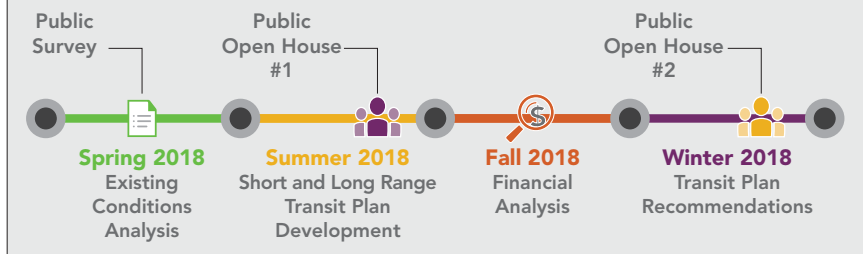

The study will provide recommendations and options that the City will use to develop transit strategies that help meet short and long-term transportation needs.

During the course of the study, there will be many opportunities for the public to provide ideas, comments, and thoughts on transit in Surprise through surveys, workshops and public meetings. Comments can also be provided online at surpriseaz.gov/transitstudy.
